EDUCATION

University of Central Florida

Orlando, FL

B.S.E. Computer Science — Expected May 2027

GPA: 4.0 | Dean's List 2023

- Coursework: Data Structures & Algorithms, Discrete Structures, Systems Software, OOP (Java), Computer Organization

University of Central Florida

Orlando, FL

Full Stack Coding Bootcamp Certificate

September 2023

- 240 contact hours — MERN stack, REST APIs, GraphQL, SQL/NoSQL, Agile development

PROJECTS

VGC Champions Vault

GitHub | Live

React, TypeScript, tesseract.js, k-means, Capacitor, GitHub Actions

- Shipped a competitive-analysis PWA that converts an opponent screenshot into a live threat matrix inside the game's 90-second prep window, running OCR (tesseract.js) and damage math entirely client-side with no backend.
- Engineered 3 self-updating data pipelines on GitHub Actions (daily usage stats, monthly ladder data, weekly tournament sheets) that cluster 6,900+ real tournament teams into archetypes with k-means and surface checks-and-counters evidence.
- Ships a single TypeScript codebase as both an installable PWA and a CI-built Android APK via Capacitor, reducing release to one push to main.

Federated Analytics API

GitHub | Live

FastAPI, Presto, Cassandra, Iceberg (IBM watsonx.data), OpenAPI

- Built a 6-endpoint analytics API against a live enterprise IBM watsonx.data cluster, using federated Presto SQL to join hot operational data in Cassandra with cold historical archives in Iceberg in a single query.
- Wrote custom Presto and Cassandra clients handling bearer-token authentication over TLS, verified by OpenAPI contract tests, driving the build spec-first (requirements to design docs to code) with AI-agent pair programming.

PrepHub

GitHub | Live

React, TypeScript, Vite, Workbox, Dexie/IndexedDB, Web Share API

- Built a Spanish-first, offline-first earthquake-preparedness PWA after the June 2026 Venezuela earthquakes: a family completes a 72-hour kit and reunification plan in one 20-minute session and retains it with zero connectivity.
- Delivered a ~120 KB first load targeting low-end Android devices, combining a Workbox service-worker precache, IndexedDB persistence, WhatsApp/print/QR sharing, and a black-screen emergency mode — no backend, no accounts.

EXPERIENCE

Verizon Wireless

Orlando, FL

Sales Engineer (promoted from Business Account Manager)

May 2025 – Present

- Resolve 15–25 billing and integration escalations weekly (3–5 daily) by interpreting system error logs and querying internal APIs, closing the majority at my level rather than routing them to Tier-2 support.
- Serve as the technical point of contact for 15 sales reps and 3 directors across a 24-store region, running roughly 10 product demos and enablement sessions per week plus 3 joint technical calls with prospective buyers.

Business Account Manager

November 2023 – May 2025

- Built a logic-based Excel automation engine for multi-condition pricing workflows, cutting deal turnaround time by 80%.
- Owned a book of 100+ SMB enterprise accounts as technical point of contact, uncovering requirements, designing tailored solutions, and driving adoption across multi-stakeholder organizations.

Wazuh, Inc.

Orlando, FL

Front End Developer Intern

June 2023 – September 2023

- Built and shipped HTML/JavaScript pages for the company website at an open-source cybersecurity company, carrying pages from an unfinished state through to public launch.
- Wired frontend pages to backend services, fetching and transforming API data to render the site's primary content.
- Reviewed teammates' code and served as the bilingual technical bridge between the engineering and sales teams, converting product internals into plain language in both English and Spanish.

LANGUAGES & TECHNOLOGIES

Languages: TypeScript, JavaScript, Python, Java, C, C++, SQL

Frontend: React, React Native, Next.js, Vite, PWAs / service workers (Workbox), Capacitor

Backend & APIs: FastAPI, Node.js, Django, REST, GraphQL, OpenAPI contract testing, TLS / bearer-token auth

Data: PostgreSQL, MySQL, Presto, Cassandra, Iceberg, MongoDB, IndexedDB (Dexie), IBM watsonx.data, automated ETL pipelines

AI & Agents: Claude Code / Claude Agent SDK (agentic & spec-driven development, MCP, subagents), Gemini API (prompt engineering, structured JSON output), OCR (tesseract.js), k-means clustering

Infrastructure: GitHub Actions, CI/CD, Docker, Vercel, Agile/Scrum

Spoken: Spanish (fluent), English (fluent), Portuguese (intermediate)
